

# AT1316 Whole Body Counter

***$^{137}\text{Cs}$ ,  $^{134}\text{Cs}$  and other radionuclides measurement in human body***

AT1316 Whole body counter (WBC) is designed for express-monitoring and measuring of gamma-emitting radionuclides in human body, as well as for internal exposure dose estimation ("Sitting straight" geometry).

## Operating principle

WBC operating principle is based on detection of incorporated radionuclide activity with spectrometric detection unit and processing of spectrometer measurement information with hardware-software instruments to define radiometric characteristic of internal contamination considering anthropometric characteristic of target person.

Whole body counter calibration using human body phantom

Measurement of a Person

## Applications

Citizens and staff individual dosimetric monitoring of internal exposure:

- Citizens and staff monitoring during and after radiation accidents
- Factory and office workers monitoring, involved into radioactive material production or use

## Features

- Stabilized spectrometric path
- Spectrometric and radiometric measurement modes
- Efficient algorithm of spectra radiometric processing for  $^{137}\text{Cs}$  and  $^{134}\text{Cs}$  radionuclides activity measurement
- Calculation of expected annual effective internal exposure dose for incorporated  $^{137}\text{Cs}$  and  $^{134}\text{Cs}$  radionuclides
- Radionuclide identification in spectrometric mode
- Flexible software control of spectrometer functions, generation of database and report based on measurement results
- Fixed chair geometry
- Compact design
- Prompt accommodation to background conditions using operational background generating option
- Can be installed into a van as part of mobile radiation monitoring laboratory
- USB Counter-to-PC connection

# AT1316 Whole Body Counter

## Specification

<b>Detector type</b>	Scintillator, NaI(Tl) Ø150x100 mm
<b>Registered gamma radiation energy range</b>	50 keV – 3 MeV
<b>Minimum measured activity of <sup>137</sup>Cs and <sup>134</sup>Cs in adult human body for 3 min. measurement interval</b>	300 Bq
<b>Radionuclides activity measurement range in human body</b>	
<sup>137</sup> Cs	80 – 7.5·10 <sup>5</sup> Bq
<sup>134</sup> Cs	80 – 4·10 <sup>5</sup> Bq
<b>Measurement geometry</b>	"Sitting straight"
<b>Limits of tolerable intrinsic relative error</b>	±15%
<b>Number of ADC channels</b>	1024
<b>Integral nonlinearity</b>	±1% max.
<b>Typical resolution at 662 keV (<sup>137</sup>Cs)</b>	9%
<b>Measurement instability during continuous service</b>	±3% max.
<b>Express-monitoring productivity</b>	15 person/h
<b>Operation mode setup time</b>	10 min
<b>Continuous run time</b>	24 h
<b>Working temperature range</b>	+10°C to +35°C
<b>Relative air humidity with air temperature ≤30°C without condensation</b>	≤75%
<b>Power supply</b>	110-230 VAC, 50-60 Hz
<b>Power consumption</b>	≤200 VA
<b>Weight</b>	250 kg

Design and specifications are subject to change without notice

## Measurement result display

The whole body counter complies with: GOST 27451-87, Safety requirements of GOST 30324.0-95, EMC requirements of EN 55011:2009, IEC 61000-4-2:2008, IEC 61000-4-3:2008, IEC 61000-4-4:2004, IEC 61000-4-5:2005, IEC 61000-4-6:2008
